**DETAILED ACTION**

1. This is in response to the amendment filed on 6 June 2010.
2. Claims 1-24 are pending in the application.
3. Claims 1-24 have been allowed.
4. Claims 25-28 have been cancelled.

***Allowable Subject Matter***

5. Claims 1-24 are allowed.

The following is an examiner's statement of reasons for allowance:

As to independent claim 1, prior art does not disclose, teach or fairly suggest a TCP communications manager capable of interacting with a plurality of client devices and server devices simultaneously via the communications interface; a secure communications manager to negotiate a secure communication session with one of the client devices; an encryption and decryption engine instructing the processor to decrypt data received via the secure communication session and direct the decrypted data to one of said server devices via a second communication session; and a load balancing engine associating each of said client devices with a respective one of said server devices based on calculated processing loads of each said server devices, wherein the decryption engine and the load balancing engine bypass an application layer of a network stack by decrypting the data from the secure communication sessions of the clients and outputting the decrypted data to the associated server devices without processing the data with the application layer of the network stack.

As to independent claim 12, prior art does not disclose, teach or fairly suggest providing an intermediate acceleration device enabled for secure communication with the customer

Art Unit: 2431

devices, wherein the acceleration device has an IP address associated with the enterprise; receiving with the acceleration device communications directed to the enterprise in a secure protocol from one of the customer devices; decrypting data packets of the secure protocol with the acceleration device to provide decrypted packet data; without processing the data packets with an application layer of a network stack, selecting with the acceleration device at least one of the plurality of servers in the enterprise based on a load calculation including processing sessions of other servers in the enterprise and associating the selected server with a communications session from the one of the clients; and forwarding the decrypted packet data from the acceleration device to the selected server of the enterprise.

Any claims not directly addressed are allowed on the virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
